8 signs of periodontal disease:

1. Drooling or dropping food
2. Nasal discharge
3. Teeth covered in tartar
4. Red, swollen or bleeding gums
5. Loss of appetite or weight loss
6. Loss of discoloured teeth
7. Discomfort when touched in mouth area
8. Bad breath

How to prevent and manage it

At the veterinary practice
- Twice-yearly dental exams.
- Annual professional dental cleanings, especially for dogs and cats over the age of three.

At home
- Excellent dental health is maintained by daily oral hygiene. The gold standard is daily brushing.

Disinfectant, anti-bacterial and anti-fungal ingredients

With a long-lasting “depot effect”
